# Every day life

---

My family tries to use as many reusable products as we can such as: cloth bags, glass bottles, reusable storage bags....

---

We try to **reduce** the use of **plastic** in our home.

---

We also **upcycle** a lot of things such as ceramics jar that we upcycle to flower vases.

# What energy sources do I use?

- I use electricity for a lot of stuff such as heating, air conditioning and cooking.
- I use electric stoves for cooking because they don't produce harmful gases.
- I use a gas-powered car for travelling which is bad because it causes **one of the biggest** environmental problems

# How green is my local community?

---

- My community is filled with a lot of trees and little forests
- It is also filled with a lot of waste which people unfortunately throw in the nature
- Every few meters there are trash cans where people can throw their waste

# Changes

- For a better Earth I should reduce my usage of plastic and walk more to places so I don't need to use cars
- I could recycle more and educate myself more on what can or cannot be recycled
- That way I can **reduce waste disposal, air pollution and educate myself more about the environmental concerns**

**THANK YOU  
FOR YOUR  
ATTENTION!!**
